Team ID	Individual
Name	Venkata Karthik Muppidi
Project Name	Automated Incident Management Lifecycle using ServiceNow
Maximum Marks	4 Marks

Data Flow Diagrams:

The Data Flow Diagram shows how an IT incident moves through the ServiceNow system, from incident reporting and classification through knowledge support, Level 2 investigation, change integration, resolution, and SLA tracking.

DFD Level 0 – Incident Management Lifecycle Automation

Source / Actor	Process / System	Data Flow	ServiceNow Table / Record	Output / Next Step
End User	Incident Reporting	Issue details, caller information	incident [INC]	Incident record created
Service Desk	Classification	Category, urgency, service, CI	incident [INC]	Classified incident
Agent Assist	Knowledge Support	Incident context / short description	Knowledge Article	Troubleshooting guidance
Level 2 Support	Investigation	Work notes, CI updates	incident [INC]	Diagnosis documented
Change Management	Emergency Change	Change details from incident	change_request [CHG]	Controlled service change
Incident / Support	Child Incident	Related or recurring issue	incident [Child]	Parent-child tracking
Resolution	Knowledge / SLA	Cause, resolution, SLA data	incident / Knowledge / SLA	Incident resolved & knowledge created

Data Flow Summary:

End User → Service Desk → Incident Classification → Agent Assist → Level 2 Investigation → Emergency Change / Child Incident → Resolution & Knowledge Creation → SLA Tracking.

The following user stories define the functional requirements for the Incident Management Lifecycle Automation project.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Service Desk Agent	Incident Creation	USN-1	As a Service Desk agent, I can create an incident for an end user.	An incident record is created with caller and short description details.	High	Sprint-1
Service Desk Agent	Incident Classification	USN-2	As a Service Desk agent, I can classify the incident using category, subcategory, urgency, service, and CI.	Required classification fields are captured and the incident can be assigned.	High	Sprint-1
Service Desk Agent	Knowledge / Agent Assist	USN-3	As an agent, I can view relevant Knowledge Articles through Agent Assist.	Relevant articles appear and an article can be attached to the incident.	High	Sprint-1
Service Desk / L2	Reassignment & Escalation	USN-4	As a support agent, I can reassign an incident to the appropriate Level 2 group.	The incident is assigned to the selected support group and ownership is visible.	High	Sprint-1
Level 2 Support	Investigation / Change	USN-5	As a Level 2 technician, I can investigate the incident and create an emergency change when required.	Investigation notes are recorded and the change request is linked to the incident.	High	Sprint-2
Service Desk / Support	Child Incident	USN-6	As a support user, I can create a child incident for a recurring or related issue.	The child incident is created and visible from the parent incident's Related Records.	High	Sprint-2
Level 2 Support	Resolution & Knowledge	USN-7	As a technician, I can document cause and resolution and create a Knowledge Article.	Resolution is saved, the incident is resolved, and knowledge is created from the incident.	High	Sprint-2
Service Desk / Manager	SLA & Tracking	USN-8	As a support stakeholder, I can track SLA status and related records for an incident.	SLA, activity, change, child incident, and knowledge references are visible.	Medium	Sprint-2
