User Acceptance Testing (UAT)

Date	24 September 2026
Team ID	Individual
Project Name	Automated Incident Management Lifecycle using ServiceNow
Maximum Marks	4 Marks

Project Overview:

Project Name: Automated Incident Management Lifecycle using ServiceNow

Project Description: A ServiceNow solution that standardizes the Incident Management lifecycle from incident creation and classification through Agent Assist, Level 2 escalation, emergency change integration, child incident tracking, resolution, Knowledge Article creation, and SLA visibility.

Project Version: 1.0

Testing Period: To be recorded during UAT

Testing Scope:

- Incident creation and classification in Service Operations Workspace.
- Category, Subcategory, Urgency, Service, Service Offering, and Configuration Item validation.
- Agent Assist and Knowledge Article search, helpful marking, and article attachment.
- Watch list and Work notes list tracking, reassignment to Level 2 support, and Configuration Item update.
- Emergency Change Request and Child Incident creation and relationship tracking.
- Cause and resolution documentation, Knowledge creation, SLA visibility, and end-to-end lifecycle validation.

Testing Environment:

URL/Location: ServiceNow Personal Developer Instance (PDI)

Credentials: Tester uses the authorized ServiceNow instance credentials; credentials are not recorded in this document.

Test Cases:

The following UAT cases are adapted to the ServiceNow Automated Incident Management Lifecycle project.

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Verify incident record creation	1. Open ServiceNow. 2. Navigate to Service Operations Workspace → List → Incidents → Open. 3. Click New. 4. Enter Short Description and Caller. 5. Save.	Incident is created successfully and displays the incident record for further processing.	To be recorded during UAT	—
TC-002	Verify incident classification	1. Open the incident. 2. Enter Description and Channel. 3. Set Category, Subcategory, Urgency. 4. Select Service, Service Offering, and Configuration Item. 5. Save.	Classification values are stored correctly and the incident remains valid for escalation and resolution.	To be recorded during UAT	—
TC-003	Verify Agent Assist and Knowledge attachment	1. Open Agent Assist. 2. Ensure Knowledge Articles are selected. 3. Open a relevant article. 4. Mark it Helpful. 5. Attach the article and add the required comment.	Relevant Knowledge Articles appear; the selected article is attached and visible in the incident Activity log.	To be recorded during UAT	—
TC-004	Verify watch list and work notes tracking	1. Open Details tab. 2. Add a user to Watch list. 3. Add a user to Work notes list. 4. Save.	Selected users are added to the appropriate tracking lists and can follow incident updates.	To be recorded during UAT	—

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-005	Verify Level 2 reassignment	1. Change Assignment group from Service Desk to Network. 2. Verify Assigned to clears automatically. 3. Save.	Incident is reassigned to Network and the Assigned to field clears as configured.	To be recorded during UAT	—
TC-006	Verify Configuration Item update	1. Open Details tab. 2. Change Configuration Item from ThinkStation to PowerEdge. 3. Save.	The updated Configuration Item is stored correctly on the incident.	To be recorded during UAT	—
TC-007	Verify emergency change integration	1. Create an emergency change request from the incident. 2. Complete required information. 3. Save. 4. Verify the change is linked in Related Records.	Emergency Change Request is created and linked to the incident for tracking and resolution.	To be recorded during UAT	—
TC-008	Verify child incident creation	1. Open Related Records. 2. Select Child Incidents → New. 3. Enter Short Description, Caller, and Description. 4. Save. 5. Verify child incident under parent.	Child incident is created successfully and appears in the parent's Related Records.	To be recorded during UAT	—
TC-009	Verify incident resolution and Knowledge creation	1. Add Probable Cause. 2. Add Resolution Code and Resolution Notes. 3. Resolve the incident. 4. Click Create Knowledge. 5. Select IT and Standard template. 6. Save.	Incident reaches Resolved state with documented cause/resolution and a Knowledge Article is created.	To be recorded during UAT	—
TC-010	End-to-end incident lifecycle validation	1. Create and classify incident. 2. Use Agent Assist. 3. Reassign to Level 2. 4. Create change/child records where required. 5. Resolve incident. 6. Verify Knowledge and SLA/Related Records.	Complete lifecycle works from creation through resolution without missing related records, broken transitions, or loss of SLA visibility.	To be recorded during UAT	—

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	No defect recorded at document preparation.	If a defect is found, record the exact steps used to reproduce it.	Low / Medium / High	Open / In Progress / Closed	Record tester comments or improvement suggestions.

Sign-off:

Tester Name: Venkata Karthik Muppidi

Date: 24 September 2026

Signature: _____

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Record detailed feedback, including suggestions for improving the incident management process.
- Bug tracking should include severity, status, and steps to reproduce.
- Verify Incident, Child Incident, Emergency Change, Knowledge Article, and SLA relationships before final sign-off.
- Obtain the required project sign-off before proceeding with deployment.
